Shops-System V1.3.5 – Version May 2024

- Multilingual, responsive

Our new Shop V1 is characterized by clarity and comfortable menu navigation - even the “inexperienced” occasional surfer will find their way around immediately and will not be overwhelmed by resource-wasting gimmicks, unnecessary functions, and confusing link blocks.

Also included is a complete ticket and support system, callback function, and much more.

The (unencrypted!) PHP code is also easily understandable for beginners and can be easily adapted to your own ideas with basic knowledge of PHP and MySQL.

A CSS-based design and numerous pre-made text pages such as the imprint, data protection, terms and conditions, cancellation policy, FAQ, etc. are also included.

Update V1.3.5 from 19.05.2024

New Function & Bug Fixes

- Adjustment of Twitter icon to X
- Mobile banner in the advertising settings
- New cookie banner design
- CSS adjustments / integration of Font Awesome V6
- CSS adjustments responsive design, so that the slider graphics are better displayed
- Evaluations for SQL storage, disk space, uploaded images, and blocked IPs/emails integrated
- Bug fix word filter function in functions.php
- Bug fix sitemap, due to outdated `get_magic_quotes_gpc` it was not saved from PHP8.0
- Sitemap was completely missing for frontend, has now been created and integrated
- `get_magic_quotes_gpc()` function replaced with `addslashes()` as `get_magic_quotes` is deprecated
- Integration of the new installer V2
- Adjustments & bug fixes for PHP 8.3
- Error output added in config file
- Automatic call installer if software is not installed
- Check in admin if installer is still present, output with red warning message

admin with the newly integrated HTML editor and also designed with HTML. It is also easy to upload images here.

- Editing function for automatically sent emails
- Search in archived orders, print found entries

...and much more!

Best to test our new, modern admin area yourself once...

Revenue through advertising,

You can generate revenue through advertising.

You determine the price yourself.

Advertising blocks are possible in all automatically sent emails, editable in the admin area!

Numerous advertising blocks are already firmly integrated and can be switched on or off by you:

- 2 advertising banners in the footer
- 1x advertising banner on the homepage (top)
- Google Analytics
- More in preparation

Security:

The script offers extensive protection against cross-scripting and SQL injection. Passwords are stored as SHA-1 hash.

All forms are spam-proof, all inputs are thoroughly checked. Outgoing emails are generated by the system and cannot be misused for spam sending.
